INTRODUCTION

Dans le but de suivre l'hydrologie de la façade maritime sénégalaise, des stations ont été placées tout le long de la côte (fig. 1).

Leur répartition a été effectuée de façon à couvrir l'ensemble du littoral.

Ainsi , on trouve la station de Mbour sur la Petite Côte, les stations de Kayar et Saint-Louis sur la Grande Côte, Thiaroye et Yoff au Cap-Vert.

Récemment une nouvelle station a été installée à Gorée , dans la zone du Cap-Vert.

Le suivi de la station de kafountine est devenu irrégulier depuis 1991.

Les paramètres mesurés aux différentes stations sont présentés à :La page suivante.

La position des stations qui ont fait l'objet de la présente étude est représentée à la figure.1.

Les données antérieures à 3.987 ont déjà été étudiées par Rebert et al (1977) , Roy et al (1985) , Bâ (1985 a et b , 1987) .

Nous nous proposons ici de présenter les données acquises entre 1987 et 1993.

Salinités (1991-1994)
Chlorophylles (1991-1994)
Nitrates (1991-1994)
Phosphates (1991-1994)

1. MATERIEL ET METHODES

Les températures et les salinités sont suivies quotidiennement à toutes les stations, excepté celle de Gorée où les prélèvements sont hebdomadaires. Cependant des interruptions de quelques jours, voire, en quelques circonstances, de quelques mois peuvent parfois survenir.

1.1 • PRESENTATION DU MATERIEL

- Un thermomètre gradué au 10^{-1} °c permet les prises des températures à partir du seau de prélèvement.
- Un salinomètre de type DIGITAL SALINOMETER E.202 localisé au laboratoire du programme environnement du CRODT permet de mesurer la salinité des échantillons prélevés et conservés dans des bouteilles à bouchon étanche.

Les sels azotés et les phosphates sont échantillonnés chaque semaine aux stations de Gorée et de Yoff , tandis que la biomasse phytoplanctonique est mesurée quotidiennement à Yoff et à Thiaroye, la station de Gorée étant visitée une fois par semaine.

2. RESULTATS

Les températures sont en degrés Celcius ($^{\circ}\text{C}$).

Les salinités sont en grammes par kilogramme (g/kg).

Les chlorophylles sont en $\mu\text{g}/\text{l}$.

Les nitrates et phosphates en $\mu\text{atg}/\text{l}$.

2.1- PRESENTATION DES TABLEAUX

Pour chaque station , par année et par paramètre , deux tableaux sont présentés.

-Dans le premier tableau se trouvent toutes les données journalières enregistrées durant l'année en cours.

• Le second tableau regroupe :

les nombres d'observations effectués par quinzaines notes NB.

les moyennes enregistrées sur quinze jours notées MOY ,

les moyennes par quinzaine de l'année théorique de référence notées REF . Ces moyennes ont été calculées sur l'ensemble des données disponibles depuis l'origine de la station.

les valeurs chiffrées des anomalies notées ANO. Ces anomalies représentent les différences entre les moyennes par quinzaine de l'année en cours et celles de l'année théorique de référence.

2.2 - PRESENTATION DES COURBES

Pour chaque station , par année et par paramètre , deux graphiques sont présentés.

Le premier graphique présente deux courbes :

- l'une correspond aux moyennes des données observées pendant l'année en cours par quinzaines.
- l'autre correspond aux moyennes enregistrées par quinzaines depuis le début de la station . Elle est considérée comme courbe de référence.

Le deuxième graphique correspond aux anomalies par quinzaines.

2.3 - PRESENTATION DE LA VARIABILITE DU PARAMETRE DEPUIS L'ORIGINE DE LA STATION JUSQU'EN 1993

Nous avons pensé qu'il était intéressant , pour une année particulière , de voir comment les valeurs se situent à la fois par rapport aux moyennes et par rapport à la dispersion des valeurs enregistrées à la station depuis l'origine . Pour éviter la multiplication des courbes nous avons choisi au hasard l'année 1993.

Le programme utilisé permet d'obtenir les courbes pour toutes les années.

Pour l'année 1993 seulement, nous avons présenté, pour chaque station et chaque paramètre deux graphiques.

Le premier graphique présente :

- la courbe pour l'année 1993, des moyennes des valeurs observées regroupées par quinzaines,
- les quantiles pour chaque quinzaine des différentes valeurs enregistrées depuis le début de la station (fig.2).

Le deuxième graphique présente à nouveau,mais pour l'année 1993 seulement les anomalies par rapport à la courbe de référence.

fig.2: REPRESENTATION DE LA VARIABILITE D U PARAMETRE
